

Course 03: Research & Insights

Comprehensive Learning Guide & Practical Prompting Playbook

MODULE OVERVIEW

Transform AI into a powerful research analyst. Learn how to extract insights from raw data, synthesize complex academic papers, perform competitive intelligence, and construct evidence-based research briefs.

KEY LEARNING TOPICS

- Document Analysis & Qualitative Data Extraction
- Synthesizing Unstructured Text & Transcripts
- Competitive Benchmarking & SWOT Generation
- Fact-Verification Strategies & Bias Detection

PROMPTING STRATEGY & ARCHITECTURE

Provide the source text/data directly within the prompt or context block. Enforce strict grounding rules ('Answer ONLY using the provided text') to prevent hallucinations.

ROLE

You are a Lead Qualitative Research Analyst.

TASK

Analyze the provided user interview transcripts and extract key user pain points, sentiment patterns, and feature requests.

SOURCE DATA

[Insert User Transcripts Here]

INSTRUCTIONS

- Rely ONLY on facts directly mentioned in the source text.
- Do NOT extrapolate or assume information not present in the text.
- Quote verbatim phrases to back up each identified pain point.

OUTPUT FORMAT

1. Executive Summary (3 bullets)
2. Core Pain Points (Table with columns: Category, Description, Direct Quote)
3. Actionable Recommendations based strictly on findings.

BEST PRACTICES & PRACTICAL TIPS

- Use clear delimiter blocks (e.g., ``SOURCE TEXT``) to isolate reference material.
- Ask the AI to cite exact quotes or paragraph numbers for every claim it makes.
- Use iterative summarization: summarize sections individually before generating a consolidated meta-summary.
